

Quick Start Guide

Setting up your GigaSpire BLAST u4m

1 Connect your GigaSpire BLAST u4m to the power outlet.

2 Once the light begins flashing red, you can pair your GigaSpire BLAST u4m (extender) with the GigaSpire BLAST u6x (router).

Less than 30 seconds apart, press and hold the WPS buttons on the extender and then the router for 3 seconds each. The light will flash green while pairing.

Note: Once the pairing is successful, both the extender and router lights will show a solid green color. This can take several minutes.

3 Use the solid green light to determine the best location for your extender.

When your extender is at an ideal distance from your router, the light will show a solid green color.

When your extender is too far from your router, the green light will blink slowly.

When your extender is too close to your router, the green light will blink fast.

4 If necessary, use the Command IQ App to set up the GigaSpire BLAST u4m. For assistance, please contact Dobson Support.
